

1. SUMMARY

Farmer #2 Ibrahim Sani reached a Red Trigger for the flowering (tasselling) stage of the 2026 maize season. Both the weather index and the independent satellite check fired (double trigger).

Payout: 29.3% of season sum insured (weather index 0.73 x stage weight 40%).

2. POLICYHOLDER

Name Ibrahim Sani (farmer #2)
Phone +2348031110002
Cooperative Saminaka Maize Farmers Coop
Enrolled by Agent SAM-03 (demo)
Farm location 10.39530, 8.67870 (50 m radius)
Zone Guinea Savanna / Middle Belt
Crop maize
Planting date 2026-06-04
Enrolled 2026-10-06

3. INSURED EVENT

Growth stage flowering (tasselling), days 50-71 after planting
Dates 2026-07-24 to 2026-08-14 (22 days)
Severity band Red Trigger (index 0.70-1.00)
Weather index 0.73 (worst case of the sub-indices)
Stage weight 40% of the season maximum
Payout 29.3% of season sum insured
Evaluated 2026-10-06 11:42:18 UTC

4. WEATHER INDEX (trigger leg 1)

Each sub-index rises linearly from 0 at the attachment point to 1 at the exit point.

measure	this season	attach	exit	sub-index
rainfall total	39.7 mm	80 mm	25 mm	0.73
longest dry spell	11 d	7 d	14 d	0.57
wettest 5 days	39.7 mm	120 mm	200 mm	0.00
days over 35 C	1 d	4 d	10 d	0.00

Drought sub-index (max of rainfall and dry spell): 0.73

Excess-rain sub-index: 0.00 Heat sub-index: 0.00

Composite weather index (worst case): 0.73

For comparison, this farm's normal for the stage: rainfall 154 mm, longest dry spell 3 d (baseline 2019-2025 (n=7)).

5. SATELLITE CHECK (trigger leg 2)

Vegetation must independently confirm crop stress, compared with this farm's own normal.

index	this season	farm normal	anomaly	confirms at	result
NDVI	0.43	0.69	-0.26	<= -0.15	fired
NDMI	0.14	0.31	-0.17	<= -0.10	fired

Rule: either NDVI or NDMI must fire, from at least 2 cloud-free scenes.

Cloud-free scenes used: 2

Scene dates: 2026-08-03, 2026-08-13

Satellite confirms stress: yes

6. DATA SOURCES AND QUALITY

Rainfall	sample (22 days)
Rain coverage	100% of days (payout needs 90%)
Payout sources	chirps, sample rainfall
Temperature	sample (22 days)
Vegetation	sample (2 scenes)
Stage complete	yes
Provisional	no - final data

7. SEASON OVERVIEW

stage	dates	index	NDVI	result	payout
establishment	2026-06-04 to 2026-06-23	0.00	+0.02	ok	0.0%
vegetative	2026-06-24 to 2026-07-23	0.00	-0.07	ok	0.0%
flowering	2026-07-24 to 2026-08-14	0.73	-0.26	Red Trigger	29.3%
grain_fill	2026-08-15 to 2026-09-16	0.00	-0.36	advisory	0.0%
maturity	2026-09-17 to 2026-10-01	0.00	-0.24	advisory	0.0%
Season total: 29.3% of sum insured (capped at 100%).					

Pilot notice: all thresholds in config/pilot.toml are placeholders pending calibration against yield-weather data and NiMet station validation. This report records how the index was computed; it is not by itself a claim settlement.
